Highland Seat

Highland Seat with treated softwood boards

The Highland Seat suits rural applications where a simple all timber seat might traditionally be used, but where maximum durability and ease of maintenance are prime concerns.

The immensely strong steel frames are hot-dip galvanized before painting and have a much longer potential lifespan than any comparable wooden frames. The boards are easily replaced, and the seat is fully recyclable, giving it excellent environmental credentials.

- Frames supplied in Street-Tough finish as standard, with twelve standard colour options, or can be supplied plain galvanized. Also available in any RAL or BS colour at additional cost
- Supplied with extend legs for below ground installation
- Boards available in brown recycled plastic, black recycled plastic, treated softwood, iroko and European oak (all approx. 50mm x 120mm)
- Uprights formed from 80mm x 120mm hollow steel section
- Length 1800mm with recycled plastic and iroko boards
- 2000mm with treated softwood and oak boards
- Weight approx. 65kg to 95kg depending upon board material
- See our website for fixing options
