

Woodland Bin

Woodland Bin in European Oak

This rustic product has a substantial but unobtrusive galvanised steel frame which extends 300mm into the ground, onto which the slats are fixed.

It is resistant to damage caused by fire, though the wooden slats on the lid can be damaged in some circumstances. The lid has an opening handle, which also acts as a bump stop to protect the slats when the door is let down. The slats are only available in Oak.

Woodland Bin before installation
